

Q. How do I use Kleen-Sheen®?

A Kleen-Sheen® is a concentrated shampoo, and only a small amount is required for routine cleaning. Only a thin layer of shampoo needs to be applied to a wet coat, main and tail or alternatively mix 10mL of **Kleen-Sheen®** per litre of luke-warm water. Massage with a sponge or brush on dirtier horses and lather through mane and tale.

For grass or other stains on white soaks, apply **Kleen-Sheen®** undiluted and rub into the hair. Then rinse off to remove the stain or discoloured area. Leave heavily soiled, scurfy or stained areas including matted manes and tails to soak for 2-3 minutes. Rinse out with running water and scrape excess water from coat. Groom once dry.

Q What pack sizes is Kleen-Sheen® available in?

A Kleen-Sheen® is available in 1L squeeze pack (16 average washes) and an 5L jerry pack and 20L plastic drum

KLEEN SHEEN®

Kleen-Sheen® is a gentle foam-lifting shampoo which cleans and removes stains, but does not strip essential oils from the coat. Foam and suds rinse out easily, leaving a soft, silky and long lasting sheen.

Kleen-Sheen® is a rapid, deep-lift foaming shampoo that easily rinses out to clean, condition and brighten the coat, mane and tail, leaving a lingering rose perfume. Ideal for show horses and ponies to highlight the coat and for racing horses for routine race day washes.

Q. What is the ingredient in Kleen-Sheen® which produces the 'Highlight' effect?

A Kleen-Sheen® is a human quality shampoo which contains foam-lifting ingredients, rather than harsh detergents found in most other horse and animal shampoos. It does not produce 'suds' or detergent bubbles, but a soft foam which lifts dirt and grime off the skin in a soft foam which rinses off with one pass of the hose. Kleen-Sheen® also contains a built-in conditioner, a silicon-like compound which prevents tangles in the mane and tail, as well as a special colour highlighter to make 'whites whiter' and coat colour more even and prominent.

Q. Is it safe to use Kleen-Sheen® around the eye area of the horse? Will it irritate if contact with the eyes occurs?

A Kleen-Sheen® is a gentle shampoo which does not contain detergents or harsh chemicals. It produces a light foam which does not sting the eyes. Simply washing it away from around the eye will remove it easily without any irritant detergent-like action.

Q. Is Kleen-Sheen® safe to use on young horses and foals?

A Yes. Kleen-Sheen® is an ideal shampoo to use on young horses which may resist handling and rinsing. Only a very small volume of shampoo is required, and in foals, gentle massaging to create the foam-lifting action will clean the coat, followed by one pass of the hose to spray out the foam.

Q. Will Kleen-Sheen® irritate existing skin conditions?

A No. Kleen-Sheen® is not a medicated shampoo, many of which contain detergents. Kleen-Sheen® will not remove natural oils from the skin, but will clean away stains and discharge from the skin without causing irritation. As it only needs minimal rinsing, it does not require the coat to be wetted to the same extent as a conventional shampoo, reducing the risk of skin softening and irritation.

Q. Does Kleen-Sheen® have any anti-bacterial ingredients?

A No. Kleen-Sheen is not a medicated shampoo. Kleen-Sheen® can be followed to clean the coat after washing the animal or affected area with PVP iodine (e.g. Betadine® or Vetadine®) to control skin bacterial and fungal infection.

Q. I use tank water which can be in limited supply, how can Kleen-Sheen® benefit me?

A Greatly! Kleen-Sheen® will save at least 60% of the water normally used to shampoo and rinse your horse. All you need to do is to wet the horse, apply a small amount of Kleen-Sheen® along the topline, mane and tail, gently massage it to activate the foam, then rinse off the topline and allow the water to run down the sides to carry the foam which cleans as it moves through the coat. Only one pass of the hose is necessary to rinse the mane and tail well. Kleen-Sheen® is also biodegradable. Early comparative studies using Kleen-Sheen® compared with a popular 'suds' shampoo, found that Kleen-Sheen® only required half the time required to shampoo and rinse the coat, and only 30% of the water required to rinse away the foam as compared to 'suds' from a large volume of detergent shampoo.

Q. I have show cattle; can I use Kleen-Sheen® on them too?

A Yes. It has the same cleaning action on cattle, dogs and other show animals, but is not recommended for the use on cats.

Q. Will Kleen-Sheen® darken or cause blotches on my horses coat if not rinsed entirely?

A No. Because Kleen-Sheen® has such a gentle action and no harsh detergent base, it will normally not irritate the skin or blotch the coat, even if some residue are left if rinsing is not sufficient. This is in contrast to detergent 'suds' shampoos which continue to irritate the skin if residues are not rinsed out thoroughly, causing skin flakes and scurf.
