

# NuBind®

○ PROFESSIONAL STRENGTH  
MYCOTOXIN RELIEF

- Grass affected
- Laminitis
- Staggers
- Diarrhea
- Neurological
- Headfick/shake
- Stringhalt
- Sick
- Convalescung

## NuBind® Components Mode of Action

*Synergistic calcium and sodium molecules bind to the mycotoxins structure, being later eliminated. This linkage is strong and will resist to variations of temperature and pH in the gut. These components are indigestible and the mycotoxins will be excreted with the feces. Even beyond the foregut mycotoxins can continue to survive. To prevent this passage, components in Nubind assist full functionality throughout the gut to trap these mycotoxins and prevent their population movement. Formulated not only to be used in specific problem cases but as a routine to help avoid health issues arising from ingestion of mycotoxins. Components in NuBind® work not just to assist control of an existing problem but also to aid removal of the problem and boost the animals performance.*

Select organic and volcanic Toxin Binders, Probiotics, Gut Conditioners to assist in protecting the body from adverse effects during incidences of high concentrations of mycotoxins. Inactive Prebiotic components in NuBind® may also help in providing a source of DNA and protein needed for the micro-flora to become very active. NuBind® will not sequestrate vitamins, mineral or any other nutrients. Developed so as not to adsorb important nutrients such as minerals and vitamins which may impair the animals growth, components in NuBind® are CEC controlled in order to guarantee adsorption efficacy without catching the feed nutrients: A low CEC means the product cannot bind mycotoxins, with too high CEC you might catch nutrients from the diets.

Scoops per day	type	type
<u>Condition</u>	<u>HORSE</u>	<u>PONY</u>
Maintenance	½	¼
Weanlings at risk	½	¼
Yearlings at risk	1	½
Grass affected	1½	¾
Laminitis	1½	¾
Staggers	1½	¾
Diarrhea	1½	¾
Neurological	1½	¾
Headfick/shake	1½	¾
Stringhalt	1½	¾
Sick/Convalescung	1½	¾

*Decrease treatment dose to maintenance when animal is showing relief from symptoms  
When exceeding maintenance dose divide NuBind® between 2 or more feeds  
Not a cure for inflicted pain or disease  
Consult your vet if animal is in pain or if symptoms persist*

Not listed under FEI Prohibited Substances  
Not listed under the Australian or NZ Rules of Racing as a banned substance  
NO WITHHOLDING.
