

Kohnke's Own®

Nutritional Supplement for Hoof Health

No Hoof, No Horse!

Strong and resilient hooves are essential for all horses, especially horses in training and regular competition, where trimming and refitting shoes is regularly carried out. Good hooves are also important for horses or ponies maintained primarily by barefoot trimming.

Horses with Naturally Poor Hooves

Some breeds of horses have inherently thin soles and weak hoof walls, requiring a special diet to help maintain hoof hardness and flexibility. Other horses naturally have recurring hoof problems, even on an adequate and well-balanced diet with added supplements.

Grow Healthy Hooves with Reboot HOOF+

Reboot HOOF+ has a range of nutrients to fuel the growth of good hoof material and a strong hoof structure. These nutrients may be low, inadequate or poorly absorbed from common equine diets. The nutrients in Reboot HOOF+ also help the growth and fullness of the mane and tail.

Field Trialled for Optimum Effectiveness

Reboot HOOF+ has been extensively tested with over 100 Aussie horses. Owners reported Reboot HOOF+ significantly improved the growth, quality and health of their horse's hooves. They also told us that it resolved hoof issues, such as splits, cracks, crumbling and brittleness.

SUITABLE FOR:

- ✓ Horses with poor quality hooves that chip, split, crumble, flake or crack
- ✓ Racing and performance horses struggling to maintain or replace shoes
- ✓ Horses with slow growing hooves or lack of resilience to changing weather conditions
- ✓ Horses with thin soles, weak hoof walls and sensitivity to hard ground
- ✓ Horses and ponies after suffering laminitis with weakened hoof structure
- ✓ Horses with a thin and sparse mane and tail or poor coat growth

REBOOT HOOF+ PROVIDES:

- Pelleted supplement of essential nutrients to grow strong and healthy hooves
- Concentrated nutrients for hoof growth and health, including biotin, iodine, calcium and sulfur
- High quality protein and special ratio of added amino acids to improve quality of hoof material
- Other nutrients linked to improved keratinisation and bonding strength of the hooves

PACK SIZES: 1.5 KG (25 DAYS SUPPLY), 4 KG (66 DAYS SUPPLY), 10 KG (166 DAYS SUPPLY)

Does Reboot HOOF+ have all the nutrients a horse needs?

Reboot HOOF+ is a specialised dietary supplement containing a selected range of nutrients with roles in optimising hoof strength and condition to grow strong and healthy hooves in horses. These nutrients may be low, inadequate or poorly absorbed from common equine diets, especially in horses with naturally poor hooves.

Reboot HOOF+ is compatible with common ration balancing supplements, such as Kohnke's Own® Cell-Provide®, Cell-Vital® or Cell-Perform®, depending on the exercise level and other dietary needs of your horse. For best results, we recommend that you keep your horse on an adequate and well balanced ration which includes a vitamin and mineral supplement, such as one from the Kohnke's Own range, then add in Reboot HOOF+ when your horse requires extra help to improve hoof health, growth and quality.

My horse has suffered a hoof injury. Will Reboot HOOF+ help?

Reboot HOOF+ isn't just for horses with bad feet, even horses with normally good hooves may need some extra help. The trial of Reboot HOOF+ showed many benefits for supplementation after hoof injuries, including abscesses, laminitis or founder, or resection and removal of part of the hoof wall and sole. These include faster growth of horn material, improved strength and resilience of the hooves and better stability of the hoof wall and sole.

When can I expect results to show?

Reboot HOOF+ is a potent and concentrated supplement that has been shown in field trials to quickly improve the growth, strength and quality of hooves. The first results of Reboot HOOF+ supplementation were seen within 7-10 weeks. This corresponded to the time period that the horse owners fed the initial dose rate of Reboot HOOF+ to their horses. We recommend feeding the initial dose for 2-3 months to maximise primary improvements in the hooves.

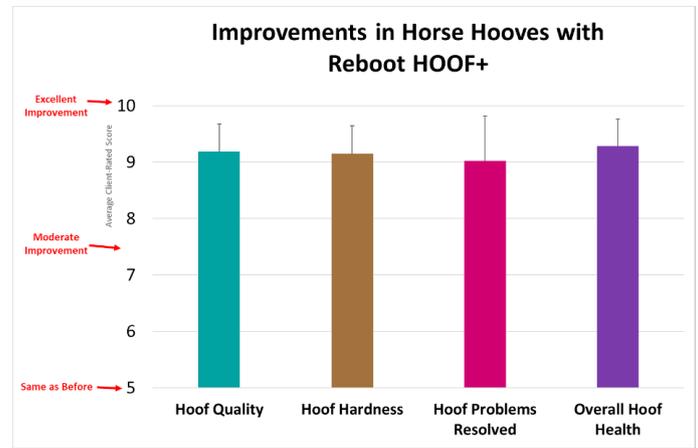

"Boots has always had problems hooves. It was very difficult to keep her shod because she had thin walls and didn't grow hoof properly. I used many other hoof supplements without success, but her hooves have improved so much on Reboot HOOF+.

She has thicker and harder walls, doesn't have breakaways and has good quality hoof growth each trim cycle.

The farrier is very impressed.

I love this product and highly recommend it!"

Cecilia M, VIC

The results of the 4 year field trial show that Reboot HOOF+ significantly improved many factors of hoof health, including the quality, hardness and instances of hoof problems such as cracks, splits, crumbling or flaking. The data is presented as user-rated feedback, where 1 = negative result, 5 = same as before and 10 means that Reboot HOOF+ had a very positive result in improving hoof health.

Karen, Kohnke's Nutritional Advisor, suggested that my horse be a part of the Reboot HOOF+ trial. This product is fantastic and the improvements were visible very quickly. Any damage to my pony's feet was arrested and the improvement has continued since. In addition to that, the skin, coat and hair also improved. I was very surprised to notice a significant sheen on her coat, mane and tail. Her hair was also less tangled and much easier to brush. These changes were all noticeable within a fortnight of starting the product. I highly recommend this product and the Kohnke's Own team to everyone. Sharon T., TAS

"Levi had major issues with tender, thin soles and couldn't keep shoes on. Reboot HOOF+ helped immensely – his soles became thicker and even on hard gravel areas he wasn't in pain. His hooves were stronger and his shoes stayed on. He's now barefoot and I'm very happy that this product helped him. I recommend it."

Sian M, NSW.
